NUZZELS

1) Pipe from cabin to septic tank to be sloped 1/4 inch per foot.
2) Drainfield piping to be 4 inch diameter flexible plastic pipe with perforated portion laid level.
3) Gravel for drainfield to be coarse (2 1/2 inch nominal) river bar gravel with as little fines as possible.
4) Drainfield piping may be curved to better fit ground contours if necessary. The three lines may be laid at different elevations to more closely match ground contours. However, the outlets at the distribution box must be equal elevation.
